

Covestro recently opened additional polycarbonate compounding production lines at their Greater Noida plant in India.

The company's advanced skills enable it to provide one of the most comprehensive product portfolios and industry-leading solutions to improve customer service.

Covestro planned this expansion in India to meet demand and to assist the 'Make in India' drive. This high-tech facility was only recently turned on.

The facility has gone through various de-bottlenecking efforts in the past, and as of 2017, it could provide roughly half of the domestic demand, with the remaining capacity coming from Thailand's Map Ta Phut Site.
