

The board of directors of Engineers India Limited (EIL) authorised a strategic cooperation with DEEP.KBB GmbH, Germany, for salt cavern projects during its meeting held recently. The alliance will cooperate to provide basic design, detail engineering, project management, and construction supervision services for underground and above ground salt cavern storage facilities for hydrocarbons and other products like hydrogen and carbon dioxide for Indian and international clients, in keeping with EIL's mission to be a global leader offering total energy solutions for a sustainable future.

The company's main areas of expertise are deep underground energy storage and solution mining for brine and salt extraction. You may rely on our years of expertise and our depth of technical, scientific, and technological understanding.

The multidisciplinary staff at the company has a wealth of knowledge that is also applied to the energy revolution: caverns can store hydrogen and compressed air, and geothermal energy can be used to produce emission-free electricity.
