

Envision Energy, a developer of renewable energy solutions, has acquired a 350 MW wind energy project from Serentica Renewables. Envision made this announcement in a press release, however it did not provide the order's worth.

"Envision will provide Serentica's wind park with a total of 106 EN156/3.3 MW Wind Turbine Generators (WTGs). When completed, it would generate 1.25 billion clean energy units and prevent the yearly emission of 1.06 million tonnes of CO₂, according to a statement from Envision.

By December 2024, the project, which will be located in Maharashtra, is expected to be operational.

In the statement, RPV Prasad, CEO, Envision Wind Power Technologies India, said, "We are delighted to partner with Serentica Renewables in building this prestigious wind power in Maharashtra. Nacelles and hubs for the wind turbines will be assembled at Pune, blades at the plants located at Trichy or Bengaluru and towers sourced from manufacturers based in Maharashtra."
