

Radico Khaitan Limited announced the successful commissioning of the dual feed plant in Rampur, Uttar Pradesh.

Radico Khaitan announced the conversion of its 140 KLPD molasses plant into dual feed in February 2022 to meet the growing demand for high quality grain-based ENA for its premium products. As a feedstock, this plant will use both molasses and grain.

Following conversion, grain ENA production at the Rampur campus will increase from 100 to 260 KLPD. This will strengthen the backward integration of Rampur's existing operations. In the future, the Rampur campus will be self-sufficient in terms of captive power, primarily through the use of bio-fuels.

The Company also announces the commencement of the bottling operations which marks the successful completion of the first phase of the Sitapur greenfield project.
